

Engineering Association

We were looking for a vendor that could create engaging e-learning modules and provide an easy-to-use, yet robust Learning Management System (LMS) for up to 85,000 members.

By choosing Vocalmeet, the rewards were profound. With their course creation services and technology, the process of getting our project live was so streamlined. This made a genuine difference with staying on-time and on-budget.

Healthcare Association

Our association needed an innovative LMS to evolve with overall technological advances and changing membership needs.

Vocalmeet provided us with its advanced LMS that is tailored to our needs and is integrated with our existing Association Management System (AMS). This system integration allows us to enhance our professional development offerings for members, while ensuring easy user navigation.

Legal Association

We needed a continuing education platform that was easy to use, with a robust set of features and technical support for our members.

We decided to work with Vocalmeet as their platform and pricing models are designed where we only pay for the features and services we need. As we are growing our online offerings, we wanted a platform that could scale with our needs.
